

THE RIGHT DATA. THE RIGHT DECISIONS.

Human/AI Decisioning Fueled by Connected Data and Context

Banking, insurance, the public sector, and telecommunications organizations are evolving faster than ever before. Digital transformation is redefining business models, risks are intensifying at both macro and micro levels, and customers expect faster, more reliable, and personalized services. To keep pace, frontline teams need instant access to the right data in context to make informed, precise, and timely decisions that meet business objectives and compliance mandates.

Transformational innovation with Gen AI

Q Assist is a Gen AI copilot and integration layer that democratizes data access, streamlines workflows, and enhances decision-making to boost the efficiency and effectiveness of analysts and customer-facing teams.

Powered by the Decision Intelligence Platform, Q Assist democratizes data access, streamlines workflows, and enhances decision-making boosting the efficiency and effectiveness of both analysts and customer-facing teams.

Research to action in minutes, not days

Streamline and augment analysis, research, and reporting tasks so your frontline teams can spend their time on higher value, strategic work.

Converse with your data to uncover insights

Empower knowledge workers with the data and insights they need from disparate sources to make better decisions.

Drive clarity with context from prompt to response

Make trusted, traceable, and consistent decisions and reduce inaccuracies by grounding responses in contextual data.

Level the playing field with function-wide consistency

Establish repeatable, secure workflows that enforce best practices, compliance, and alignment with organizational standards.

Enhance productivity and improve effectiveness with context-aware Gen AI

Q Assist unlocks hidden insights faster and empowers teams to make smarter context-driven decisions.

Research assistance

Spot more risk and opportunity faster with instant access to critical data and information related to customers, counterparties, suppliers and transactions through a conversational interface.

Report generation

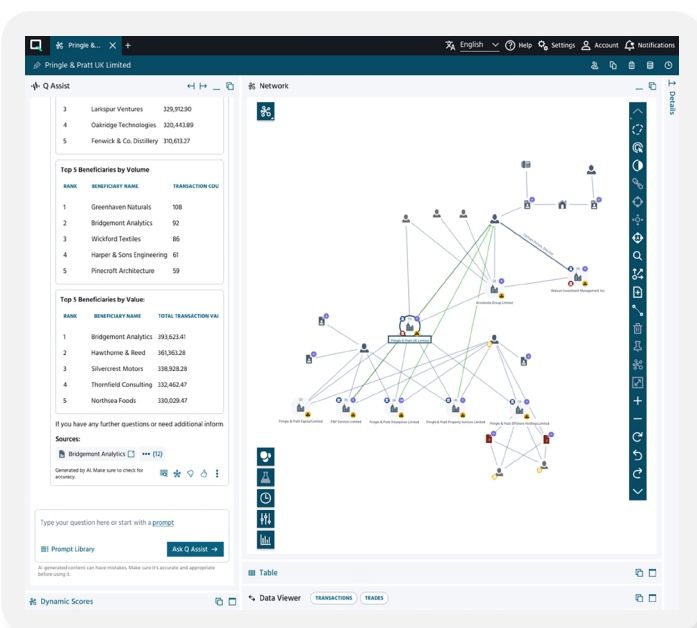

Accelerate reporting workflows with predefined report templates for research summaries, escalations, and regulatory reports.

Prompt management

Build, manage and share trusted prompts among teams and functions to ensure consistency, repeatability, and facilitate training while meeting organizational and regulatory standards.

Contextual RAG

Ground Gen AI responses in contextual information to reduce hallucinations and inaccurate responses while maintaining trust with transparent and explainable results.

Operationalizing trusted Gen AI across the organization

The promise of Gen AI is well-recognized, and organizations are investing significant amounts of time and resources into AI initiatives aimed at protection, optimization, and growth. Yet, many organizations still face challenges in fully operationalizing Gen AI in their day-to-day functions.

Large language models (LLMs) are only as good as the data they're trained on, making it essential to integrate your organization's proprietary data to unlock true enterprise value. In the same way your teams need data and context to make decisions, so too do LLMs and copilots.

Integrating Quantexa's Decision Intelligence Platform with LLMs empowers organizations to leverage their data more effectively. This combination enhances decision-making capabilities, allowing front-line staff to access reliable and context-rich information that supports smarter, data-driven decisions.

Copilot agnostic

Easily integrates with existing copilots

Agent-ready

Supports multi-agent architecture for seamless interaction with proprietary agents

Secure

Granular security and controllable data access you can trust

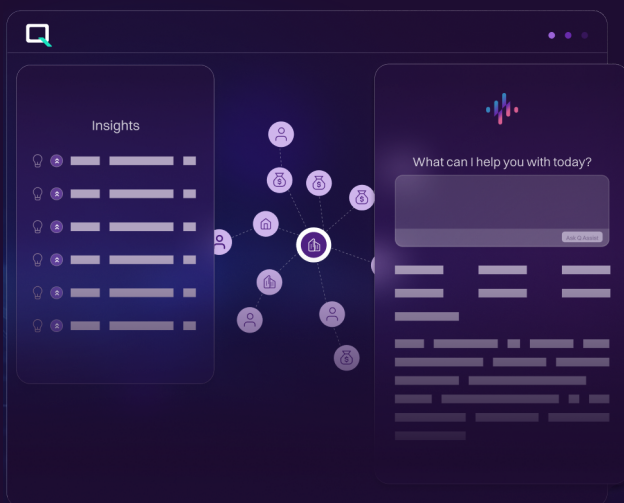

LLM agnostic

Integrates seamlessly with foundational models or proprietary LLMs

Revolutionize team productivity with Q Assist

Underpinned by the Quantexa Decision Intelligence Platform and tailored to critical industry use cases, Q Assist empowers teams to close the gap between data and decision igniting a more productive workforce.

Banking

Manage financial crime and fraud risk, optimize banking operations, and accelerate growth.

Insurance

Identify growth opportunities, optimize underwriting and claims operations, and protect against leakage and loss ratios.

Public Sector

Protect against fraud and financial crime and optimize operational efficiency to better serve citizens.

Telecommunications

Reduce revenue leakage, identify more fraud, enhance operational processes, and accelerate customer growth.
